SUMMARY

Computer Engineer (TEC, 2019) with experience in Django and Node.js building REST APIs, integrations, and server-side logic for web and VR products. Currently at Opal Interactive, contributing to Startus's NestJS backend and the server logic for an AI avatar. In parallel, I design and operate my own backend systems in production: an AI content pipeline that runs with zero human intervention, and multiplayer networking layers for games (Unity Netcode + Relay).

SKILLS

Backend

Django · Node.js · Express · NestJS · REST APIs · Python

Data / AI

LLM integration · RAG pipelines · data processing and validation (automated fact-checking)

Infrastructure

GitHub Actions (CI/CD) · Vercel · Firebase · cron jobs / automation

Networking (games)

Unity Netcode for GameObjects · Unity Relay · client-server architecture for WebGL

WORK EXPERIENCE

Full-Stack Developer (Backend-focused) — Opal Interactive

Apr 2026 — Present

Studio that takes on projects from various companies and distributes them across its dev team

- Contributed to Startus's backend (NestJS + Prisma + PostgreSQL), part of a 4-repo SaaS platform.
- Server logic and multiplayer sync (Netcode + Unity Relay) for HealthSim, an XR training simulator.
- Firebase integration for totempanadol (storage and QR generation).

Full-Stack Developer, Backend-focused (Jr/Mid) — IMMERSO

Apr 2021 — Jan 2023

- Built Django backends powering React.js/Next.js frontends.
- Database-driven content for editors and maps used in web/VR experiences.

Full-Stack Developer (Jr) — SolvoSoft

Aug 2020 — Feb 2021

- Developed and optimized features with Django on legacy systems.
- Collaborated with cross-functional teams to improve system performance.

Full-Stack Developer (Jr/Mid) — WOW Emotions

Jan 2022 — Feb 2023

- Implemented server-side functionality for an end-to-end VR website.
- Optimized performance across devices and browsers.

React / Frontend Developer — Freelance — independent projects 2021 — Present

API integrations for various clients

- Solucom — Remote Gate Access (2023): IoT access-control system with a Raspberry Pi (Python) as the physical controller, Vue.js frontend, and Laravel/PHP backend, synced over an API with a password database.
- Integrated frontend applications with third-party REST APIs under varying requirements and deadlines.

INDEPENDENT PROJECTS

NewsPulse — personal product — newspulse.dev Jun 2026 — Present

Fully autonomous Python backend pipeline

- Python orchestration (research → LLM writing → fact-check → publish) run on a GitHub Actions cron with no human in the loop.
- Published as static JSON consumed by the frontend, with deploys triggered on every push.

QuickLobby — Netcode Relay Kit — personal product — in development Jul 2026 — Present

Extracted, packaged multiplayer networking layer

- Extracted and packaged the connection logic (Netcode for GameObjects + Unity Relay) from my game Tinted Showdown as a standalone UPM package.
- Fixed WebGL-specific production bugs in Relay endpoint selection; preparing for release on Fab.com.

FeedBack Figuras 3D — personal product 2025 — Present

Supabase backend

- Data validation with Zod, admin panel, and feedback export in JSON format.

EDUCATION

Computer Engineering 2019

Tecnológico de Costa Rica (TEC)

High School Diploma 2015

Liceo San Rafael de Alajuela
