ABOUT ME

I'm a Computer Engineer graduated from Tecnológico de Costa Rica, with over 4 years building websites, apps, and video games for companies and my own projects. I currently work at a development studio that takes on projects from different companies, building everything from training simulators to AI-powered virtual characters. In my own time, I've also built a news site that updates itself every day and several video games that anyone can play online today. I learn quickly, adapt well to different teams and clients, and I like finishing what I start.

AREAS OF WORK

Web development

- Websites and browser applications
- Clear, easy-to-use interfaces
- Working with design teams

Video games

- Games for computer, mobile, and browser
- Online multiplayer games
- Virtual and augmented reality

Artificial intelligence

- Automating repetitive tasks with AI
- Virtual assistants/characters that hold conversations

Way of working

- Teamwork
- Meeting deadlines
- Solving technical problems

EXPERIENCE

Full-Stack and Game Developer — Opal Interactive

Apr 2026 — Present

A studio that takes on projects from different companies to build with its team

- Helped build an augmented-reality training simulator for medical staff.
- Developed an interactive kiosk application with a camera for a well-known brand campaign.
- Contributed to a virtual character powered by artificial intelligence that holds conversations with people.
- Collaborated on a web platform connecting companies, and on virtual-reality projects for other clients.

Full-Stack Developer — IMMERSO

Apr 2021 — Jan 2023

- Built and maintained company websites, connecting what users see with the information stored in the system.
- Worked on interactive and virtual-reality experiences for different projects.

Full-Stack Developer — WOW Emotions

Jan 2022 — Feb 2023

- Was responsible for the entire development of a virtual-reality website for a reconstruction project.
- Designed and built an immersive nature experience with more than 5 different scenes.

Full-Stack Developer — SolvoSoft

Aug 2020 — Feb 2021

- Improved features on existing web systems, working as part of a cross-functional team.

Independent Developer (Freelance) — Various clients 2021 — Present

- For a client (Solucom), built a remote gate-opening system: a small computer (Raspberry Pi) connected to the internet that talks to a website to control access.
- Worked with different clients on web projects, adapting to each one's needs and short deadlines.

FEATURED PERSONAL PROJECTS

NewsPulse (newspulse.dev) — personal project Jun 2026 — Present

A news site that writes and publishes itself, every day

- Built a system that finds real news, writes it up with the help of artificial intelligence in 4 languages, checks that the information is accurate, and publishes it automatically without anyone doing it by hand.

Published video games — personal projects 2025 — Present

Playable today from a browser or phone

- Designed and programmed several video games, including one online multiplayer game, available to play directly from the internet.

FeedBack Figuras 3D — personal project 2025 — Present

A system for collecting customer opinions

- Built an app where customers can rate and upload photos of custom 3D-printed figures they bought, with a panel to see all the feedback.
